

SPA WATER MAINTENANCE SCHEDULE

DAILY MAINTENANCE

Water sanitation is to be taken care of daily. Try to maintain a range of 2-5ppm Free Available Chlorine or Bromine residual. After each use, add the recommended amount of sanitizer into the filter compartment while the jet pump is operating (if you have a Hot Spring Portable Spa with a clean button on it, you can use that, and the spa will run for 10 minutes then shut itself off.) Run the jet pump for 10 minutes

WEEKLY MAINTENANCE

1. Test spa water pH; maintain pH in 7.4-7.6 range. Adjust as required (Refer to chart).
2. Shock the spa using _____ Tablespoons of Spa Guard Shock or Enhanced Shock.
(Remove spa cover & run jets 20 – 30min then recover spa)
3. 4 hours after shocking Add Stain & Scale Control _____ ounces.
4. 24 hours after shocking Add _____ ounces of Spa Perfect to eliminate waterline build up
5. Rotate cartridges every 2 weeks.

MONTHLY MAINTENANCE

1. Twice a month remove filters and rinse out with garden hose.
2. Clean the spa cover with a mild detergent. After rinsing use **Cover Shield** to help protect cover.
3. To clean /deodorize the underside of cover use **Stow Away**
4. Bring a quart of water to any Fiesta location for your free water analysis.

EVERY 3-4 MONTHS

1. Drain and refill your spa
2. While the tub is empty, clean the inside shell with **Surface Cleaner** and soft cloth
3. Clean the outside of the cabinet by spraying it off with a garden hose or using a non-abrasive cloth.
4. Clean your filters using **Spa Guard Filter Cleaner & Degreaser** (follow directions on the bottle).

START UP OR REFILL

1. When you're ready to drain and refill your spa, you need to first turn the power off at the breakers. In models from '96-'04 you need to turn the 30 amp breaker off, wait 30 seconds, turn the 20 amp breaker off, then drain the spa. **When you refill the tub, fill spa by placing hose inside the standpipe in filter compartment.** Once full, turn power on at breakers as follows: Turn on 20 amp breaker, run spa jets for 30 seconds, turn jets off. Go to breaker box and turn 30 amp breaker on.
2. Adjust total alkalinity and pH levels as needed before continuing.
3. Upon starting your spa, it needs to be "super" chlorinated or brominated. You can achieve this by adding _____ teaspoons of _____ Concentrate.
4. Stain & Scale Control needs to be added 4 hours after shocking. You need to add _____ oz. of Spaguard Stain & Scale Control.

IMPORTANT

- *** A spa being used over an extended period of time, such as a whole afternoon or evening you will need sanitizer added every hour to maintain the average residual of 2-5 ppm.
- *** The use of trichlor-s-triazinetrione for water sanitation or Muriatic Acid to lower the pH could damage your spa.
- *** Keeping the spa cover on and secured during nonuse will reduce the chemical demand and help maintain the spa's energy efficiency.
- *** Always add spa chemicals into filter compartment while jet pump is operating.
- *** Always test the spa water for temperature with you with your hand before use to make sure it is comfortable

*****This is based on 2 people for 30 minutes—if used more, please adjust chemical usage*****
